## Turret system description

These turrets are suitable for use on high-capacity turning machines for forward as well as equipollent reverse machining. They are equipped with all of the features and functions of modern high-performance and high-capacity tool turrets. Their robust design and short switching times mean they are also very well suited for heavy-duty use in series manufacture

### Turret series

- 0.5.460.4xx without tool drive
- 0.5.456.4xx with axial tool drive
- 0.5.450.4xx with radial tool drive

### Features:

- Single Motor Technology
  - The turret and the tool drive share one motor; this means lower investment costs and higher level of reliability
- For equal high-performance forward and reverse machining
- Drive with standard servo or spindle motors for fast bidirectional positioning
- High degree of stability due to high locking forces
- Locking device uses special triple generating Hirth-type gear (pat.)
- Not affected by collisions due to safety clutch and annular slot for the disk tool
- Directly controllable with machine controller
- Connection with centralised lubricating system to ensure extremely high service and usage life\*)
- Can be installed in any position
- Stable housing with large fastening surface ensuring high stiffness
- High thermal stability

\*) High dependance due to seal tool disk by means of sealing with air purge

### Options:

- Air purge connection for turrets with radial tool drive
- Housing available as block or L-shaped, right and left design
- Central rotary feed-through for fluid-actuated tools and a high-pressure coolant device
- Attachment of transfer elements for switching sensors in tool disk
- Attachment of sensors to monitor cutting force
- Turrets with Y-axis slide units
- Software package for operating the system with a Siemens control Type 840-D
- Fluid rotary feedthrough
  - The turret are available with a central rotary feedthrough
    - version „uncontrolled“                      Feedthrough in all indexing positions  
e.g. air purge, tool gripper
    - version „controlled“                        Feedthrough in single position  
e.g. coolant, tool changing
  - Feed through for max. three pipelines in turret center.  
pressure  $P_{max}= 100$  bar (Standard)

Description  
Series 0.5.460.4xx

## Disk-type tool turret series 0.5.460.4xx without tool drive

### Description

- 1 Tool disk
- 2 Spur gear
- 3 Safety clutch for turret drive
- 4 Electrical locking control
- 5 Drive motor
- 6 Reference switches
- 7 Hirth-type gearing
- 8 Coolant valve

<b>Mass</b>		
Turret (incl. standard housing, without tool disk, without motor)	m	kg
Tool disk and tooling	m <sub>zul</sub>	kg
<b>Adm. ambient temperature</b>		
		°C

1) Conditions:

- Direct drive with Siemens servo motors and driving torques in accordance with the table on [page 12](#)
- Fluid supply sufficiently large
- Turret up to operating temperature
- without controller-related non-productive time
- Attention! Increased indexing times with
  - higher mass moment of inertia of tool disk and toolholders
  - higher mass moment of inertia of other motors
  - lower driving torque

2) Ensure compliance with the required filter fineness for the tools used. For example spindle heads with internal coolant supply.

$$\Delta\beta = \pm 4'' \cong \pm 2 \cdot \frac{X[mm]}{100[mm]} [\mu m]$$

## Disk-type tool turret Series 0.5.456.4xx with axial tool drive

### Description

- series and a **decentralized** tool drive for individually switchable, **axially** placed tools for forwards machining.
- Hydraulic operation mode

### One-motor technology:

- Turret and powered tools (spindle unit) are powered by single motor after the gear switching. Engaging and disengaging the active tool is effected through fluid activation, after positioning of the drive spindle - no tooth on tooth situation! This allows for quick engaging without searching. The tool coupling is designed for spindle heads with coupling tothing in accordance with DIN 5480 and with spindle locking system.
- SAUTER-Spindle units-**Type 0.5.941.xxx**
- Product Information **PI 29.3**.

Adm. rpm <sup>1)3)</sup>	$n_{zu}$	min <sup>-1</sup>	6000	5000	4000	4000	3200
Gear ratio	$i = n_1 / n_2$		1,0				
<b>Recommended drive motors<sup>4)</sup></b>							
Siemens-Servomotor, Typ 1FT6..			..064-AK..	..084-AK..	..086-AH..	..105-AF..	.. 108-A ..
Max. torque <sup>5)</sup>		Nm	14	28	40	68	100
Adm. rpm <sup>5)</sup>		min <sup>-1</sup>	6000	5000	4000	4000	3200
Fanuc-Servomotor, Typ $\alpha$			8/4000 is	12/4000 is	22/4000 is	40/4000 is	auf Anfrage
Adm. torque <sup>5)</sup>		Nm	12	18	33	60	
Adm. rpm <sup>5)</sup>		min <sup>-1</sup>	4000	4000	4000	4000	
Fanuc-Spindelmotor Typ $\alpha$			1,5	2	3	6	8
Adm. torque <sup>5)</sup>		Nm	11	25	40	56	70
Adm. rpm <sup>5)</sup>		min <sup>-1</sup>	6000	5000	4000	4000	3200

- 1) The values are reference values for short-term operation. Higher rpms generate more heat and noise, especially when the belt drive is used!
- 2) Torque limitation at motor converter required! Admissible torque partially smaller than with turret drive!The listed torque values apply to smooth machining (such as thread-cutting). In the case of machining with severe shock loads (e.g. face milling and similar operations), it is necessary to reduce the motor drive torque by 50% or more.
- 3) With absolute value encoder.
- 4) Other motors upon request.
- 5) At tool coupling 40% WT – 5 min(Angaben der Motorenhersteller)

**Performance data at the tool coupling**

**Admissible duty cycle of the tool drive during short-time operation (reference values)**

Admissible duty cycle [DC] (5 min)	100%	80%	60%	40%	25%
Admissible relative drive rating $\left[ \frac{P_c}{P_{zul}} \right]$ and Admissible relativ rpm $\left[ \frac{n_c}{n_{zul}} \right]$	25%	40%	50%	75%	100%

$P_c$ = required cutting rate [kW]  
 $n_c$ = required cutting rpm [min-1]  
 $P_{adm}$ = Adm. drive rating [kW]  
 $n_{adm}$ = Adm. rpm [min<sup>-1</sup>] (see chart S. 23)

**Example calculation:**

Wich speed  $n_c$  and wich power  $P_c$  with 40% DC (5 min) are supported on a tool drive, size 20?  
 According to the table on [page S. 23](#):  
 $P_{Adml} = 10 \text{ kW}$ ,  $n_{adm} = 4000 \text{ min}^{-1}$

Acc. to chart page 22, 40% DC:  $\frac{n_c}{n_{adm}} = 75 \%$  und  $\frac{P_c}{P_{adm}} = 75 \%$

und  $P_c = P_{adm} \cdot \left[ \frac{P_c}{P_{adm}} \right] = 10 \text{ kW} \cdot 75 \% = 7,5 \text{ kW}$

$n_c = n_{adm} \cdot \left[ \frac{n_c}{n_{adm}} \right] = 4000 \text{ min}^{-1} \cdot 75 \% = 3000 \text{ min}^{-1}$

In this example the tool drive can be operated with  
 $P_c = 7,5 \text{ kW}$   
 $n_c = 3000 \text{ min}^{-1}$   
 for 2 minutes and then it must rest for 3 minutes.

## Disk-type tool turret Series 0.5.450.4xx with radial tool drive

### Description

- Basic turret series **0.5.460.4xx**
- series and a **centralized** tool drive for individually switchable, **radially** placed tools for forwards and backwards machining
- Hydraulic operation mode

### One-motor technology:

Turret and powered tools (spindle heads) are powered by single motor after the gear switching.

Engaging and disengaging the active tool is effected through fluid activation, after positioning of the drive spindle

- no tooth on tooth situation!
- this allows quick engaging without searching.

The tool coupling is designed for spindle heads with coupling tothing in accordance with DIN 5480 and with spindle locking system.

1) Overall weight of the turret incl. tool disk SW1 and without motor.

Dimensions in mm

2) See SAUTER spindle units, type 0.5.941.xxx (Product information PI 29.3) and SAUTER toolholder (Product information PI 07.2).

3) Valid for 8 and 12 tool positions / 16 tool positions on request.

4) High load load stage required.

5) See SAUTER spindle units, type 0.5.935.xxx (Product information PI 45) Other toolholder systems – e.g. HSK – on request.

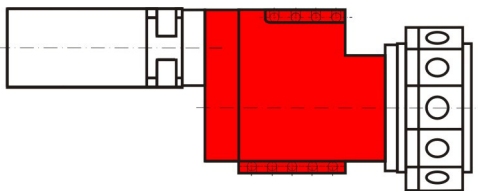

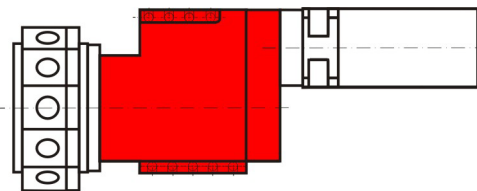

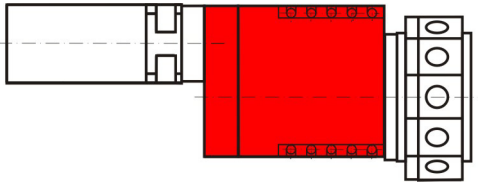

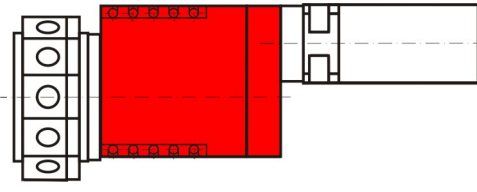

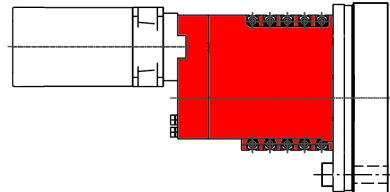

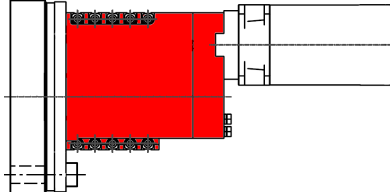

6) Further particulars see tool turret 0.5.460.4xx

**INDICATION:** Instruction the operating duration (DC) [see page 24.](#)

## Options

### Housing shape

Version Left	Version Right
 <p><b>L-shape housing</b> For forwards and backwards machining with turret type 0.5.460/450</p>	 <p><b>L-shape housing</b> For forward and backwards machining with turret type 0.5.460/450</p>
 <p><b>Block-shape housing</b> For forwards machining with turret type 0.5.460/450</p>	 <p><b>Block-shape housing</b> For forwards machining With turret type 0.5.460/450</p>
 <p><b>Block-shape housing</b> For forwards machining with turret type 0.5.456</p>	 <p><b>Block-Form</b> For forwards machining with turret type 0.5.456</p>

Further housing shapes upon request

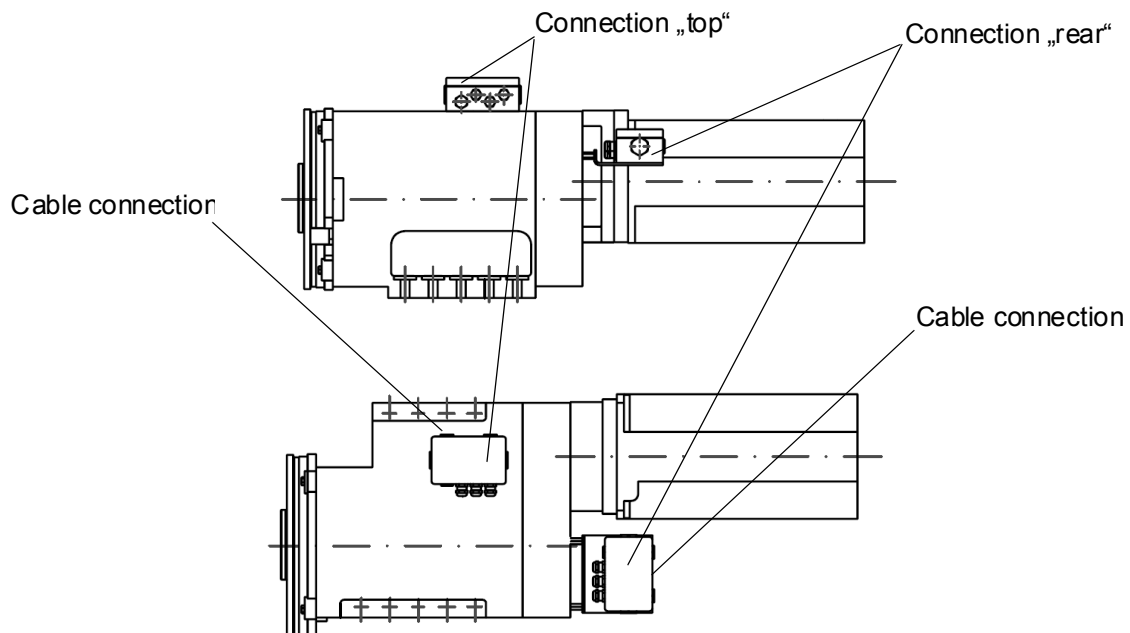

### Arrangement of the drive motor for series 0.5.460 / 456 / 450

Redirection: (Option with belt drive)

### Electrical connection for series 0.5.460 / 456 / 450

- Electrical connections:
- Terminal box (standard)
  - Terminal box with round plug connectors (optional)
  - Arrangement "top" or "rear"

### Working position

The working position is defined as that turret position, in which the tool is supplied with coolant and – with turret series 0.5.456.4xx and 0.5.450.4xx - driven.

### Tool location axial (Series 0.5.460.4xx, 0.5.456.4xx)

### Tool location radial (Series 0.5.460.4xx, 0.5.450.4xx)

Type key
